CSST HEALTH STUDY

YOUR INPUT IS NEEDED

We are a team of health professionals and academic researchers that are interested in understanding the effects of the Combined Sewer Storage Tunnel (CSST) construction project on the health of residents in the New Edinburgh and Lindenlea area. We are conducting a study, using health questionnaires, to find out how CSST construction activities are affecting your health, specifically your sleep and stress levels - **ACTiON: Assessment of CSSTs Impact on Neighbourhoods** CHEO's research ethics board has approved this study.

Within the next few weeks, you will receive a questionnaire that should take about 15 minutes of your time. You are under no obligation to complete the questionnaire but we hope you will contribute to this important and useful study. This is a 30-month study, so we will send out additional questionnaires to track and compare data. The information and results from this study will be made available to anyone in the community that is interested.
